

REPORT EXERPTS

MAIN INFOGRAPHICS

Note to Infographics Document

The authors have prepared this document as a convenience to readers who may wish to have a quick reference to the main infographics as contained in the original report dated March 22, 2022.

These infographics **do not** provide enough information to give the reader a thorough understanding of the overall issues contained in the original report and should only be used as reference materials in conjunction with the complete report.

6.1.4 Detailed Review of Causes of Death in Various Age Groups 2020

Like all things in life, perspective is one of the most important measures as to how much mitigative action a person should take when facing certain situations.

The following data is derived from Statistics Canada database reference:

<https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?pid=1310039401&pickMembers%5B0%5D=2.7&pickMembers%5B1%5D=3.1&cubeTimeFrame.startYear=2020&cubeTimeFrame.endYear=2020&referencePeriods=20200101%2C20200101>

The data presented in the following table are unadjusted, except that Statistics Canada reports the specific causes of death as the “top 50 causes” despite some of the causes listed recording zero deaths in 2020. We have deleted the causes of death that were zero rated for 2020.

Also, it is interesting to note that 21% of the total deaths for 2020 were listed as “Other Causes”. In other words, no explanation for these deaths were provided in the statistics, except that they were not in the list of “top 50 causes of death”.

In this section we will review the “risk of death” in the year 2019, and compare it to the year 2020. Further, we will compare the risk of death from Covid 19 to the risk of death in various age groups from various causes reported by Statistics Canada.

According to Statistics Canada, here are various age groups and causes of death in Canada for the year 2020:

2020	Number of Deaths																Totals
Age Range	0 - 14	15-19	20-24	25-29	30-34	35-39	40-44	45-49	50-54	55-59	60-64	65-69	70-74	75-79	80-84	85 ++	
Total in Age Group	6,041,733	2,102,402	2,484,313	2,647,713	2,664,486	2,632,387	2,465,574	2,392,365	2,452,279	2,746,773	2,561,677	2,168,710	1,788,124	1,219,909	812,613	856,146	38,037,204
Total Deaths	616	733	1,552	2,229	2,596	2,995	3,638	4,886	7,511	13,281	18,931	24,277	31,089	35,372	41,334	114,543	305,583

6.2 Statistics Infographics

The authors believe that a thorough and clear understanding of the risks associated with the Covid 19 pandemic is fundamental.

The following infographic sheets have been prepared to clearly describe the information contained in Section 5.1 of this report.

Those people who are responsible for the alleged criminal actions either knew or ought to have known the actual risks associated with Covid 19 prior to implementing sweeping and unprecedented mandates that have caused such devastating harm to the Canadian people.

Medical professionals certainly understand science, and statistics and risk.

It is inconceivable that the overall risks of the Covid 19 infection were not clearly understood, when early as May 2021, this information was available to the public at large.

When there is a fiduciary trust between two parties, a special trust and a special responsibility exists between those two parties.

It is the contention of the authors that the data available was so obvious, that disregard of that information was in fact a criminal offence, and that any harm resulting from those criminal offences must be accounted for, and those responsible brought to justice.

Manitoba Health Fact Sheet

DID YOU KNOW?

What Are Your Odds?

The following is a discussion of the risks presented by Covid-19 based on the actual statistics reported by Statistics Canada as of May 2021 and as presented in the previous graphs and tables.

2019 Over 70 years Old - Odds of Dying

2019 Odds of Dying All Causes	
Number of People	4,668,591
Number Total Deaths	145,569
Percent Chance of Death Any Cause	3%
Odds of Death in 2019	1 in 32

2020 Odds of Dying With Covid 19	
Number of People	4,676,492
Number Covid Deaths	14,441
Percent Chance of Death From Covid 19	0.31%
Odds of Death in 2020 with Covid 19	1 in 324

2019 Death any Cause vs 2020 Death with Covid 19

If you are over the age of 70

- In 2019, (prior to Covid 19) there were 4,668,591 people over the age of 70 in Canada.
- In 2019, there were a total of 145,569 deaths in this age group.
- In 2019, (prior to Covid 19) **your odds of dying** in a given year if you were over 70 years of age are: **1 in 32**.
- In 2020, your **odds of dying from Covid-19**, if you are over 70 year of age are: **1 in 324**

2019 Zero to 19 years Old - Odds of Dying

2019 Odds of Dying All Causes	
Number of People	8,139,512
Number Total Deaths	1,365
Percent Chance of Death Any Cause	0.0168%
Odds of Death in 2019	1 in 5,963

2020 Odds of Dying With Covid 19	
Number of People	8,144,135
Number Covid Deaths	2
Percent Chance of Death From Covid 19	0.0000%
Odds of Death in 2020 with Covid 19	1 in 4,072,068

2019 Death any Cause vs 2020 Death with Covid 19

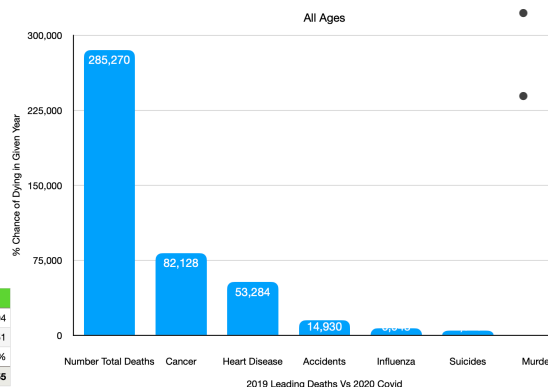

If you are under the age of 19 In 2020, Two Covid 19 Deaths Reported for this age group

- In 2019 (Prior to Covid 19) (12 months) there were:
 - 43 Murders
 - 232 Suicides
 - 316 Fatal Accidents
 - 20 Deaths from Influenza

2019 All Ages Leading Causes of Death

2019 Odds of Dying All Causes	
Number of People	37,324,486
Number Total Deaths	285,270
Murders	501
Suicides	4,528
Accidents	14,930
Influenza	6,943
Cancer	82,128
Heart Disease	53,284
Percent Chance of Death Any Cause	0.7643%
Odds of Death in 2019	1 in 131

2020 Odds of Dying With Covid 19	
Number of People	38,037,204
Covid	16,151
Percent Chance of Death From Covid 19	0.0425%
Odds of Death with Covid 19 in 2020	1 in 2,355

2019 Leading Deaths Vs 2020 Covid

At any age (in the General Population)

- By May 14, 2021, there has been a **Total of 15,606 reported deaths** from Covid 19
- In 2019 (Prior to Covid 19) there were:
 - 387 Murders
 - 4,012 Suicides
 - 13,746 Accidents
 - 6,893 Deaths from Influenza
 - 52,541 Deaths from Heart Disease
 - 80,152 Deaths from Cancer
 - 6,912 Deaths from Diabetes
 - 6,166 Deaths from Alzheimer's
 - 13,660 Deaths from Heart Attack

Manitoba Health Fact Sheet

DID YOU KNOW?

mRNA Vaccines & Pregnancy

What are the real risks of Covid 19 to pregnant women and what do we know about the new mRNA vaccines.

Facts:

1. mRNA vaccines are new and have never been used in humans before
2. There are no long term studies on the effects of the mRNA vaccines
3. The safety and efficacy of mRNA vaccines in pregnant woman has not been established
4. It is unknown if mRNA vaccines are excreted in human milk
5. The risk of the mRNA vaccines to newborns and infants is not known
6. It is unknown if mRNA vaccines have an impact of fertility
7. Anaphylaxis has been reported associated with the mRNA vaccine
8. Carcinogenic potential has not been assessed
9. Genotoxicity has not been assessed
10. Reproductive & Developmental Toxicity in Humans has not been assessed

Risk of Death

According to Statistics Canada the mean age of a mother at the time of delivery (live births) for the 2019 is 31.2 years of age.

In 2020 following are the statistics for women between the ages of 20 and 40 years of age:

Age	Numbers of Deaths 2020									
	Total	Total	Covid	Pregnancy	Cancer	Heart	Influenza	Accident	Suicide	Murder
20 - 39	5,096,479	2,890	20	24	416	114	29	655	341	39
Odds of Dying	1 in X	1,763	254,824	212,353	12,251	44,706	175,741	7,781	14,946	130,679

Odds of Death are 1 : the Number in the row Above
Example: the odds of dying of any cause is 1 in 1,763

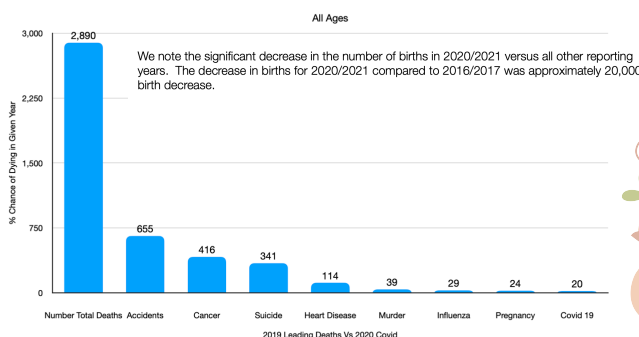

In the main child bearing age range there are a total of 5,096,479 women. A Total of 20 Covid-19 deaths were reported for this age group in 2020.

The Odds of dying from any cause for this age group is: 1 in 1,763
The Odds of dying from being pregnant is: 1 in 212,353
The Odds of dying from Covid 19 is: 1 in 254,824

So the odds of dying from simply being pregnant were higher than from getting and dying of Covid 19.

2020 Women of Child Bearing Years Cause of Death

2019 Odds of Dying All Causes	
Number of People	5,096,479
Number Total Deaths	2,890
Accidents	655
Cancer	416
Suicide	341
Murder	39
Influenza	29
Heart Disease	114
Pregnancy	24
Covid 19	20
Percent Chance of Death Any Cause	0.0567%
Odds of Death in 2019	1,763

Manitoba Health Fact Sheet

DID YOU KNOW?

mRNA Vaccine Safety Data

What do we know about the testing of and safety of the mRNA Vaccines.

Facts:

1. mRNA vaccines are **new** and have **never** been used in the general population before
2. mRNA vaccines are like no other vaccine ever used wide scale before
3. The mRNA vaccine **does not** prevent you from getting Covid-19
4. The mRNA vaccine **does not** prevent you from transmitting Covid-19
5. Protection levels **drop off** substantially over a short period of time
6. There are no long term studies on the effects of the mRNA vaccines
7. The safety and efficacy of mRNA vaccines in pregnant women has not been established
8. It is unknown if mRNA vaccines are excreted in human milk
9. The risk of the mRNA vaccines to newborns and infants is not known
10. It is unknown if mRNA vaccines have an impact of fertility
11. Anaphylaxis has been reported associated with the mRNA vaccine
12. Carcinogenic potential has not been assessed
13. Genotoxicity has not been assessed
14. The risk of vaccine induced Myocarditis and Pericarditis in young people is not known
15. Reproductive & Developmental Toxicity in Humans has not been assessed
16. According to Pfizer, between December 1, 2020 to February 28, 2021 (3 months) they had received 42,086 reported cases of adverse reactions to their mRNA vaccine; this included 1,123 fatal cases. Pfizer listed **9 full pages** of "Adverse Events of Special Interest".
17. According to the VigiAccess System (WHO) in 2021 alone, there were 2,879,136 adverse reactions reported with the Covid-19 Vaccine, as of writing this report they had reported over 3.3 million.
18. Canadian government website related to Covid-19 adverse reactions, stopped reporting deaths attributed to the vaccines.
19. In Canada, if you are under the age of 14, you are 15,780 times more likely to experience an adverse reaction from the covid-19 vaccine, than you are from dying of Covid-19.

6.4.1 ICU Bed Infographics

Following are a number of infographics which can be used to illustrate the ICU capacity issues in Manitoba during the time leading up to the pandemic and through 2020.

Such a dramatic decrease in Manitoba's capacity to address a medical emergency, in and of itself, is criminally negligent, and the public were largely kept in the dark about what was going on, or had no appreciation for it. Where was the outcry from the medial societies?

Manitoba Health Fact Sheet

DID YOU KNOW?

ICU Beds Used in Manitoba 2020

The Chart on the Left shows the number of ICU beds that the Province of Manitoba reported to be used for Covid 19 Patients.

The **Blue Line** shows the Daily Number of ICU beds occupied by Covid 19 Patients

The **Red Dotted Line** at the top, indicates the number of ICU beds available in Manitoba in 2007.

The **Yellow Dotted Line** In the Middle, indicates the number of ICU beds available in Manitoba in 2017.

The **Green Dotted Line**, indicate the number of ICU beds available in Manitoba in the Fall of 2019 with the closure of the Seven Oaks Hospital ICU.

Maximum ICU Bed Usage Occurred May 21, 2021: 76 Beds

Vaccinations Began in December 16, 2020

It is Unknown how many of these ICU beds were occupied by people in the ICU **BECAUSE OF COVID 19**, rather than in ICU for other reasons **WITH COVID 19**.

According to the WRHA*

2017

402 Critical Care Health Nurse Positions Available;

279 Critical Care Health Nurses Employed;

2019

187 Critical Care Health Nurse Positions Available;

140 Critical Care Health Nurses Employed

200% Reduction In Staff

* Winnipeg Regional Health Authority

Manitoba Health Fact Sheet

DID YOU KNOW?**ICU Beds in Manitoba Prior to 2020**

Number of ICU Beds In Manitoba

Canada Average ICU Bed Per 100,000 People = 13.5

Manitoba ICU Bed Per 100,000 People (2019) = 4

2016 Study CIHI - ICU Admissions in Canada Increased 12% between 2007 to 2013

Manitoba ICU Bed Count Decreased by 214% from 2007 to 2019

In 2013 - 2014; 34% of ICU Patients in Manitoba Received Short Term Invasive Ventilation

ICU 6 Month Mortality Rate: 20%

DESPITE INCREASING DEMAND FOR ICU BEDS, BETWEEN 2007 AND 2019 MANITOBA REDUCED THE NUMBER OF ICU BEDS BY 215%.
